

Value Formulary

Non-formulary drugs and available alternatives

Non-Formulary Drug List as of April 1, 2024

The Value Formulary is a list of drugs that have been selected based on their clinical effectiveness, safety, and value. When a drug does not offer clinical advantage over a less costly brand or generic, it may not be on the Value Formulary.

In the chart on the following pages, the column titled "Non-Formulary Drug" lists drugs that are not on the Value Formulary. The column titled "Formulary Alternative" lists covered drug alternatives¹ that are available through the Value Formulary. To look up any drug on the Value Formulary, visit ibx.com/ffm/formulary5v.

Please note that because prescription drug benefits vary by group, the inclusion of a drug as a "Formulary Alternative" does not imply coverage. Please call the Pharmacy Benefits number on the back of your member ID card if you have any questions about your prescription drug benefits.

This document is current as of the date prepared and is subject to change. Drugs listed are commonly prescribed. New drugs are not immediately placed on the Value Formulary until they have been reviewed, at which time they may or may not be placed on the formulary. Please use the online drug look-up tool to determine the current status of any drug.

¹ Some of the formulary alternatives may be subject to quantity limits, age limits, morphine milligram equivalent (MME) limits, and cumulative stimulant limits or have prior authorization requirements.
