Title: Icosapent ethyl (Vascepa®)
Policy #: Rx.01.228

Application of pharmacy policy is determined by benefits and contracts. Benefits may vary based on product line, group, or contract. Some medications may be subject to precertification, age, quantity, or formulary restrictions (ie limits on non-preferred drugs). Individual member benefits must be verified.

This pharmacy policy document describes the status of pharmaceutical information and/or technology at the time the document was developed. Since that time, new information relating to drug efficacy, interactions, contraindications, dosage, administration routes, safety, or FDA approval may have changed. This Pharmacy Policy will be regularly updated as scientific and medical literature becomes available. This information may include new FDA-approved indications, withdrawals, or other FDA alerts. This type of information is relevant not only when considering whether this policy should be updated, but also when applying it to current requests for coverage.

Members are advised to use participating pharmacies in order to receive the highest level of benefits.

Intent:
The intent of this policy is to communicate the medical necessity criteria for icosapent ethyl (Vascepa®) as provided under the member's prescription drug benefit.

Description:
Elevated triglyceride levels are associated with and appear to be implicated in the pathogenesis of atherosclerosis and cardiovascular disease (CVD). Atherosclerosis is the most common underlying pathology in patients with CVD. Fasting plasma triglyceride concentrations may be categorized according to the National Cholesterol Education Program (NCEP) as normal (<150 mg/dL), borderline (150–199 mg/dL), high triglyceride (HTG; 200–499 mg/dL), and severe HTG (HTG; ≥500 mg/dL). Patients with triglycerides above 500 mg/dL are also at risk of pancreatitis. Elevated plasma triglyceride concentrations contribute to increased risk of cardiovascular disease, both directly and because such elevations are associated with risk factors such as obesity, metabolic syndrome, and type 2 diabetes mellitus. Diet and lifestyle changes along with treatment or elimination of secondary causes are recommended before direct pharmacotherapy. If these changes are not possible or not effective, initiating triglyceride-lowering pharmacotherapy may be required.

Vascepa® (icosapent ethyl) is indicated:

1. As an adjunct to maximally tolerated statin therapy to reduce the risk of myocardial infarction, stroke, coronary revascularization, and unstable angina requiring hospitalization in adult patients with elevated triglyceride (TG) levels (≥150 mg/dL) and
   a. Established cardiovascular disease or
   b. Diabetes mellitus and 2 or more additional risk factors for cardiovascular disease.
2. As an adjunct to diet to reduce TG levels in adult patients with severe (≥500 mg/dL) hypertriglyceridemia.

The mechanisms of action contributing to reduction of cardiovascular events with Vascepa® (icosapent ethyl) are not completely understood but are likely multi-factorial. Increased omega-3 fatty acid eicosapentaenoic acid (EPA) lipid composition from carotid plaque specimens and increased circulating EPA/arachidonic acid ratio have been observed following EPA treatment. EPA inhibits platelet aggregation under some ex vivo conditions. However, the direct clinical meaning of individual findings is not clear.

Policy:
Severe Hypertriglyceridemia

Initial Authorization:
Icosapent ethyl (Vascepa®) is approved when BOTH of the following are met:
1. Diagnosis of severe hypertriglyceridemia defined as pre-treatment triglyceride level greater than or equal to 500 mg/dL; and
2. Medication will be used adjunct to an appropriate lipid-lowering diet; and
3. Member has an inadequate response or inability to tolerate omega-3-acid ethyl esters (generic Lovaza®)

Authorization Length: 6 Months

Reauthorization:
Icosapent ethyl (Vascepa®) is approved when ALL of the following are met:
1. Diagnosis of severe hypertriglyceridemia defined as pre-treatment triglyceride level greater than or equal to 500 mg/dL; and
2. Documentation of positive clinical response to therapy; and
3. Member continues to use the medication adjunct to an appropriate lipid-lowering diet

Authorization Length: Indefinite

Hypertriglyceridemia—Reduction of risk of cardiovascular events

Icosapent ethyl (Vascepa®) is approved when ALL of the following are met:

1. Diagnosis of severe hypertriglyceridemia; and
2. Member has pre-treatment triglyceride level between 150 mg/dL to 499 mg/dL; and
3. Member currently has or is considered high risk for cardiovascular disease (CVD) as evidenced by ONE of the following:
   a. Both of the following:
      i. Member is 45 years of age or older; and
      ii. Member has established cardiovascular disease; OR
   b. All of the following:
      i. Member is 50 years of age or older; and
      ii. Diagnosis of diabetes mellitus; and
      iii. Member has 2 or more additional risk factors for cardiovascular disease (e.g. cigarette smoking, hypertension, creatinine clearance less than 60 ml/min, etc.); and
4. One of the following:
   a. Member has been receiving 12 consecutive weeks of statin therapy at maximally tolerated dose and will continue to receive statin therapy at maximally tolerated dose; or
   b. Inability to tolerate statin therapy

Authorization Length: Indefinite

⚠️ Black Box Warning as shown in the drug Prescribing Information:
N/A

⚠️ Guidelines:
Refer to the specific manufacturer's prescribing information for administration and dosage details and any applicable Black Box warnings.

BENEFIT APPLICATION

Subject to the terms and conditions of the applicable benefit contract, the applicable drug(s) identified in this policy is (are) covered under the prescription drug benefits of the Company’s products when the medical necessity criteria listed in this pharmacy policy are met. Any services that are experimental/investigational or cosmetic are benefit contract exclusions for all products of the Company.
